LexisNexis® Clinical Integration Portal

Actionable data for improved patient care and reduced costs

The need to empower physicians to manage their patient populations effectively is greater than ever with the onset of new care delivery models and adoption of risk-based reimbursement models.

Indeed, effective population management is at the core of virtually all provider activities in the new health care environment, as they compete for appropriate reimbursement, meet health plan metrics, monitor their performance related to pay-for-performance metrics, answer the call for reduced costs and, most importantly, hit the targets established for improved quality of care and wellness.

Obviously, the solution is to be found in data, more specifically, in actionable data that provides a comprehensive view not only of each patient, but specific groups, as well. That is, the type of data that delivers valuable insights and drives optimal decision making.

LexisNexis® Clinical Integration Portal was designed to do just that, providing physicians with a view into the risk of their patient panel. Our Clinical Integration Portal presents a consolidated view view of a patient's full clinical and claims data, as well as analytics based on the integration of this information all at a physicians fingertips.

A New Perspective for a New Era

Whether used as an independent physician portal, or to populate an existing portal, the LexisNexis Clinical Integration Portal provides a unique perspective on provider practice patterns, highlighting paths to cost savings and improved care. The LexisNexis solution also can be integrated with Electronic Medical Records (EMR) systems.
Leveraging the power of clinical and claims data, LexisNexis® Clinical Integration Portal provides a 360-degree view of a provider's patients, including care, risk assessments, severity profiles, lab and prescription drug data and compliance with evidence-based disease measures for key chronic conditions.

In addition, physicians are kept up to date with guidelines from numerous industry organizations, including the National Committee for Quality Assurance, Physician Quality Reporting Initiative and National Quality Forum, which are monitored and revised with new procedures, diagnoses and codes as they change. Clinical Integration Portal helps in meeting minimum use requirements.

The patient information contained within the Clinical Integration Portal:

- Medical history
- Compliance with evidence-based guidelines (from key industry organizations) for an individual with his or her health profile
- Utilization (emergency room, inpatient, office visits, outpatient hospital, pharmacy) relative to other individuals with his or her health profile
- Predictive analytics from LexisNexis Population Health Monitor, powered by MEDai science
- Pharmacy compliance and misuse
- Laboratory results

The best way to enhance a provider's ability to treat their patients, adhere to programs in their networks, and truly participate in collaborative care, is to provide insight directly to the patient's future risk, as well as history. LexisNexis Clinical Integration Portal enables these insights to be accessed wherever the provider is, and whenever the information is needed.

Better Information for Improved Performance

Among key features and benefits of Clinical Integration Portal are:

- Disease Registries that enable providers to view compliance by disease state, compliance figures, and drill down capabilities on any condition listed to view patient-level data.

- Full portal access or information sent to client's enabled portal, providing enhanced communication for stakeholders.

- Easy access to both patient level analytics, as well as performance metrics, configured to share information the way a physician or clinician needs it in practice.

- Utilization analysis relative to entire populations, including:

    - Emergency room / 1000
    - Inpatient / 1000
    - Office visits / 1000
    - Outpatient hospital / 1000
    - Pharmacy / 1000

- Patient level history, as well as predictions, enabling a single patient truth for the provider.

- Patient level profiles that enable better patient management with most recent events:

    - Most recent E&M, ER, inpatient and outpatient events
    - Compliance with maintenance drug therapy
    - Compliance with evidence-based medicine and gaps in care, including lab results measures
    - Laboratory results

- Pharmacy Compliance Analysis, which can result in notifications to appropriate physicians for earlier control of the patient.

With data, analytics and benchmarking, LexisNexis Clinical Integration Portal powers ongoing improvement in clinical, financial and operational performance.
